

# Design Documentation

An individual portfolio app, <https://aliasgariprofile.herokuapp.com/>, developed by CSS for web design and frond-end development employers.

It is presenting my name and contact details, Links to my Github and LinkedIn account, Information about me to demonstrate my personality, study and work history.

Also, it is presenting my knowledge and techniques regarding HTML and CSS.

Two majors CSS visual designing techniques used for this app are: Transition and Parallax besides bootstrap grids and containers.

This is a responsive application both in medium to large and small screen size devises, by applying the method of two different CSS files on one html file.

This method makes able this app to act with two different looks and views in large and small devises. So, unsolved CSS problem, e.g. Parallax, in mobile phones has been solved by replacing it with a scrolling simple technique and of course in one URL.

Hence,

\_Displays checked and works correctly on mobile devices.

\_Displays checked and works correctly in different browsers.

The wireframe both for desktop and mobiles are as figure1.

The logo which is representing my two first letter of full name is as figure 2.

Colors of application chose by/from <https://www.canva.com/color-palette/> website based on background.

Font of application chose by/from <https://fonts.google.com/> website based on background, simplicity and 100% readability.

All icons and pictures except myself, are from free sources.
